

PLANNING
GENERAL

We need to do planning differently. We need to restore and create environments which are more sustainable, beautiful, people-centered and fiscally responsible. Land is the ultimate non-renewable resource.

We continue to evolve effective ways of fully involving communities in the planning process which can be fun, save time and achieve broad support from all stakeholders.

Whether as coordinators or participants, we relish team work and inter-disciplinary team building in addressing frequently complex challenges. And we enjoy collaborating with our fellow planners.

Our projects range in size and complexity from single lot site plans to new communities, from high density urban to semi-wilderness areas.
